

FOREWORD

MORIYASU S

Vice President,
Department of Business
Policy, Faculty,
JFE Steel

In Japan, the energy (PM) accounts for about 70% of the total energy demand, and 90% of the energy demand is met by PM. The energy demand has increased steadily over the past decade, and the energy demand is expected to continue to increase. The energy demand is expected to increase due to the increase in the number of people, the increase in the number of cars, and the increase in the number of buildings. The energy demand is expected to increase due to the increase in the number of people, the increase in the number of cars, and the increase in the number of buildings.

However, the demand for energy is expected to increase due to the increase in the number of people, the increase in the number of cars, and the increase in the number of buildings. The demand for energy is expected to increase due to the increase in the number of people, the increase in the number of cars, and the increase in the number of buildings. The demand for energy is expected to increase due to the increase in the number of people, the increase in the number of cars, and the increase in the number of buildings.

Occasionally, the demand for energy is expected to increase due to the increase in the number of people, the increase in the number of cars, and the increase in the number of buildings. The demand for energy is expected to increase due to the increase in the number of people, the increase in the number of cars, and the increase in the number of buildings. The demand for energy is expected to increase due to the increase in the number of people, the increase in the number of cars, and the increase in the number of buildings.

In the future, JFE Steel will continue to work towards reducing the demand for energy. The demand for energy is expected to increase due to the increase in the number of people, the increase in the number of cars, and the increase in the number of buildings. The demand for energy is expected to increase due to the increase in the number of people, the increase in the number of cars, and the increase in the number of buildings.

Based on the above, JFE Steel will continue to work towards reducing the demand for energy.
