

Reactor Characteristic Evaluation and Analysis Technologies of JFE Steel[†]

JKTVCVKP³ⁿ " Vcuvwjkmq³ⁿ " PCOKMCYC⁴ⁿ " Okucq⁴ⁿ " PKUJKPC⁵ [qujkcmk⁵

Abstract:

Reactor characteristic evaluation and analysis technique was constructed by JFE Steel including the design optimization simulation for the purpose of performance improvement of high frequency reactor. Based on the simulation, reactors which satisfy a given specification were designed with different core materials and core size. The validity of the simulation result was proved by physically fabricating these reactors and estimating the performance under the actual use conditions. Moreover reactor noise visualization was achieved by using a sound energy flux density system. It is possible to promote a solution suggestion of reactor to a customer by utilizing these tools.
